

MEESONS

RANGE BROCHURE

Revolving Doors

Revolving doors are an efficient means of providing elegant and inviting high throughput entrance control. They provide unhindered access to facilitate a continuous flow of building users.

Why choose Meesons?

Since 1864, we have delivered entrance and access security solutions for forward-looking organisations seeking a building entrance solution adapted to their day-to-day operations. Today, we provide superior operational effectiveness, better, simpler customer experiences, and the ability to scale easily. We work with every customer to create an entrance control solution that meets their organisations' requirements.

Now, with a long-established nationwide and international presence, we are proud to be trusted by many prestigious companies for our market-leading solutions installed in iconic buildings and locations.

What we do

Identify how best to protect your space, people and assets.

The company endorses a layered security approach and collaborates with outstanding manufacturing partners to provide physical security for various settings. Business managers work with architects and security consultants to ensure the right balance between aesthetics and protection for clients.

Improve end-user experiences by unifying physical security with data.

Establishing lasting relationships with clients allows for a deeper understanding of their needs, including product usability, access control integration, and management software connectivity. Combining technology and physical security can enhance the functionality of smart buildings.

Modernise your access security faster, with greater confidence.

The focus on empowering change within physical security has led to product innovation, including the largest number of LPS 1175: Issue 8 approved products and the world's only high-security revolving door approved to LPS 1175: Issue 8.

Service

Meesons is dedicated to ensuring the longevity of your investments, which is why all products automatically come with a 12-month warranty. We recommend an aftercare service plan that includes regular inspections, maintenance, and repairs to keep your system running smoothly, safely, and efficiently.

One plan. Made simple

Our knowledge of environmental factors, usage, wear and tear and the impact on entrance performance emphasizes the importance of maintenance and protection. While our products are designed to endure the test of time, we acknowledge the necessity of regular servicing and upkeep to ensure uninterrupted use.

We offer one simple Service Plan, which is customisable. With bolt-on features, you can create a plan to suit your business needs.

Why choose a Revolving Door?

Revolving Doors are a sophisticated entrance solution for efficiently managing the pedestrian flow and high-traffic scenarios. As the most energy-efficient entrance solution, revolving doors minimise drafts and enhance energy and cost efficiency, reducing a building's carbon footprint without compromising security. Their open and user-friendly design elevates the entrance to any secure space, making a statement while ensuring a welcoming transit for multiple users. Our choice of security revolving doors offers greater throughput than security portals; they work to secure the line of your building, using anti-tailgating detection to minimise the risks of unauthorised access and physical attacks.

Ideal for...

Your considerations

Whether securing corporate buildings, commercial spaces, public venues, or dealing with high-traffic environments, revolving doors effectively manage high levels of traffic flow through your areas. Their open and elegant design balances aesthetics with exceptional functionality, with the ability to provide energy efficiency.

Benefits to your business

- Provides complete assurance with the highest level of security certifications on the market
- Contributes to cost efficiency, energy savings, and environmental sustainability
- Accommodates multiple user transit in busy work environments

Fine-tuned to your needs

Revolving doors optimise traffic flow with efficient enhancements, with some incorporating configurable day and night modes for optimal functionality. This adaptable traffic management system ensures complete control to meet the ever-changing needs of the 24-hour period.

Benefits to users

- Generates welcoming entrance experience to enhance user comfort
- Allows for easy transit for multiple users at a time
- Evokes a strong sense of safety in the workplace

“We’ve had an excellent experience of working with Meesons and would not hesitate to work with them on future projects where we need a responsive and quality provider of secure access solutions.”

Nick Pyman
Property Manager at 9 Portland Street

3-Wing Revolving Door

Rev 3

The Rev 3 is a three-wing revolving door offering an efficient entrance solution with its always-open always-closed design. This sustainable and aesthetically pleasing option is favoured by many buildings. By minimising air exchange between interior and exterior spaces, it helps save energy and reduce costs, regardless of external temperatures.

3-Wing Security Revolving Door

Rev 3S

The Rev 3S is a high-security revolving door that manages access control while handling high foot traffic. It features advanced tailgating and anti-piggybacking detection to permit only authorised users. The door operates based on signals from access control systems, like card or biometric readers, ensuring secure entry. Its bi-directional flow capability makes it suitable for busy, high-security settings.
